

# DWA\_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

---

1. What parts of encapsulating your logic were easy?

I found it easy to identify and encapsulate the parts of the script that had been repeated three times, and to utilize this within the abstraction.

---

2. What parts of encapsulating your logic were hard?

I found it difficult to figure out the appropriate parameters and how to abstract elements that were different. I stuck to what worked for me (using id, image, title and author as the parameters) , but more code could have been abstracted from scrips.js if I had created a function using matches and page as parameters and brought in the loop as well.

---

3. Is abstracting the book preview a good or bad idea? Why?

I believe it's a good idea. It is a long piece of code that is repeated three times, it is single use and abstracting it definitely makes the
